CS 6440 Project Final Submission

Developing an App to collect data for people at risk of Alzheimer's Disease

- Final Submission

Term: Spring 2024 Yuan Shang

Section I: Project Overview

Project Title: Developing an App to collect data for people at risk of Alzheimer's Disease

Team Members and Roles/Responsibilities (If Applicable)

• Yuan Shang – Frontend, User Experience, Backend, Deployment **TA Mentor:** Michael Romano

Project Task Status

- Project initialization: set up softwares, github projects, etc.
- Finished Material and Background check.
- Information Flow Chart.
- Finished News Generation Module.
- Finished Audio recording Module as a Flash App.
- Finished login porter using smart FHIR
- Finished new patient registration
- Finished various module integration. Relationship database contraints, etc.
- Finished app deployment

Section II – Project Artifacts

Deployed Application URL: (It's a standalone app.)

GitHub Repository Link: https://github.com/RaymondSHANG/AudioCollector

GitHub Branch or Commit to Grade (If Applicable):

ffc6ea7977f771e17da2e99ab18908d9baf2dbba

Section III – Project Presentation

Presentation Link: (GoogleDrive

https://drive.google.com/file/d/1MyxZbfmB320Zcl3aJslkEzhp95gxX8Kn/view?usp=sharing)

Provide a FULL URL, DO NOT EMBED THE LINK IN A WORD OR PHRASE.

Note: Convert Slides to PDF and Merge with this single submission. You could add the contents of this deliverable to the final slide deck and convert the whole thing to a PDF to submit. Just make sure all links are clickable and do not include the submission information in the video presentation. (This is to provide a backup to presentations, both to ensure smoother grading in case of an error in a presentation and to maintain a record in Canvas.)

Section IV – Project Documentation

Create a directory in your GitHub repository called "Documentation". Within this directory provide the following:

- Technical and/or User Manual
 - o Provide information on deployment of the application.
 - Provide basic user instructions in order to utilize the application fully and show off all features.
 - Special Instructions for Grading ("navigate to this URL...type in the following...click on this...etc.") for the instructing team to follow in order to successfully deploy and run your application (in the event it is necessary, trust us it happens every semester). Include any special build or launch instructions. Please do not forget login information or anything such as FHIR patient IDs that may be needed.
 - PLEASE USE MARKDOWN SO NO DOWNLOAD/CLONE IS REQUIRED.
- Research
 - Any research done during the course of the project. This will vary heavily by project. As always, check with your TA mentor on expectations.
- Architecture Diagram
 - o Include an up to date version of your architecture diagram from Sprint #2.

- Startup and Configuration Files
 - o Dockerfile, docker-compose.yml, etc..., as applicable

For each item included, provide a labeled direct links. Use full URLs, do not embed the link in a word or phrase.

All of the documentation that you submit with your final project should be treated as an official deliverable – this includes the technical/user manual(s). Documentation that is not well structured or clearly written may result in point loss, as it can impact use and thus grading of the application.

PPT slice:

Developing an App to collect data for people at risk of Alzheimer's Disease

Yuan Shang

TA mentor: Michael Romano

CS6440, Spring 2024

Background

- Alzheimer's Disease (AD, here and after) is a chronic neurodegenerative disease and the most common cause of dementia.
- The early signs of the disease include forgetting recent events or conversations. Over time, it progresses to serious memory problems and loss of the ability to perform everyday tasks. This whole process may last for over 20 years.
- Timing of interventions to the disease are very critical to the clinical outcomes. However, there is no satisfying tool for the early diagnosis.
- Linguistic performance has been shown to be useful as an early biomarker of AD.
- A convenient tool that record the linguistic performance would largely fill the gap by: 1. Collect huge amount data of audio data, 2.establish the relations between audio data and cognitive function.

Development

The web based app:

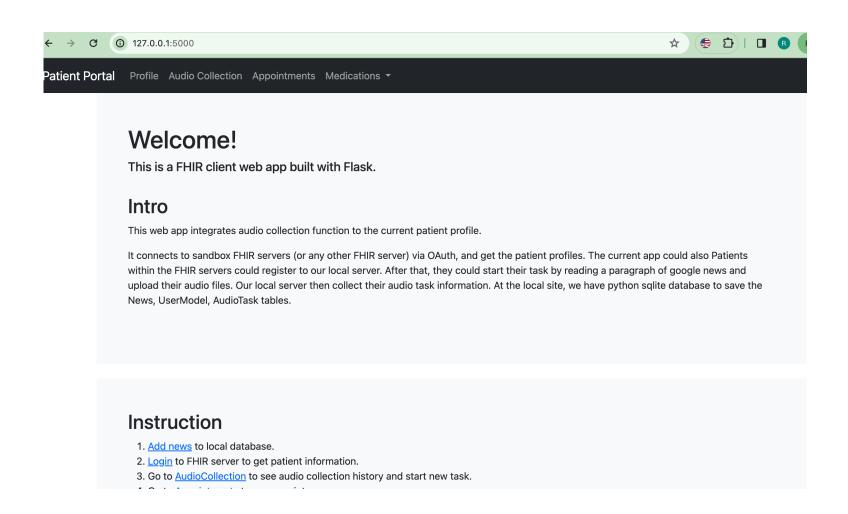

Python flask as the development environment.

Python sqlite database to save data

Python fhirclient to communicate with FHIR server

Demo

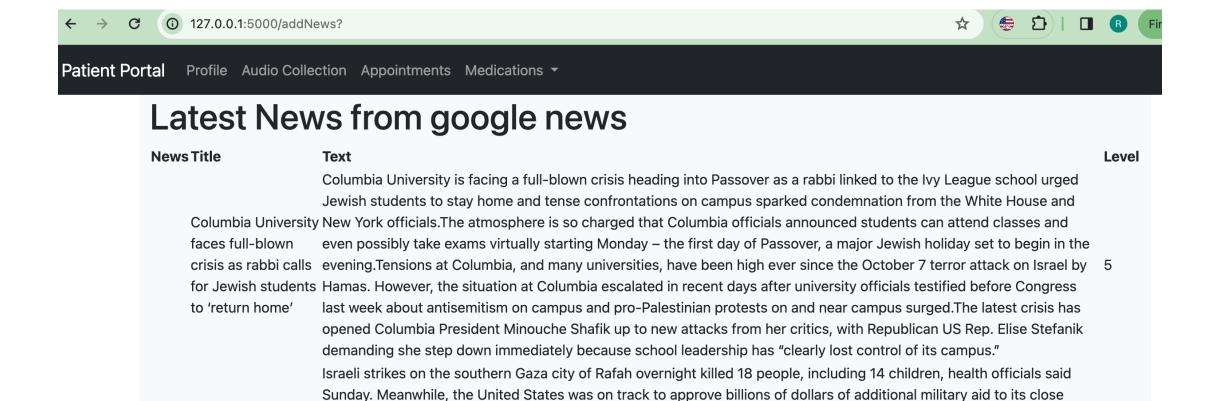

Welcome

Show random news

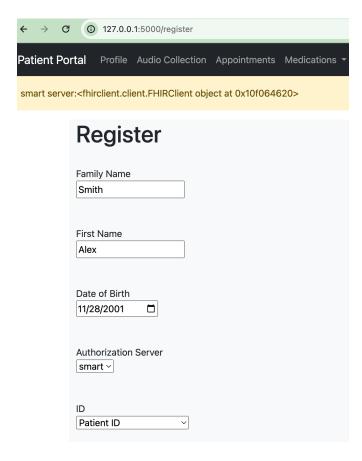

Add new google news

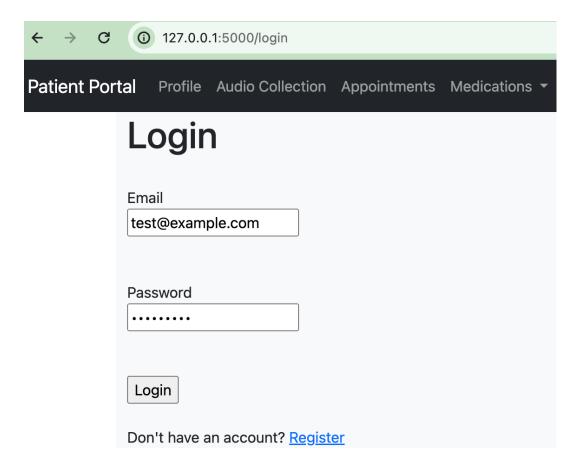

Patient registration

 First check patient in FHIR. Only patient authorized at FHIR could register in the server

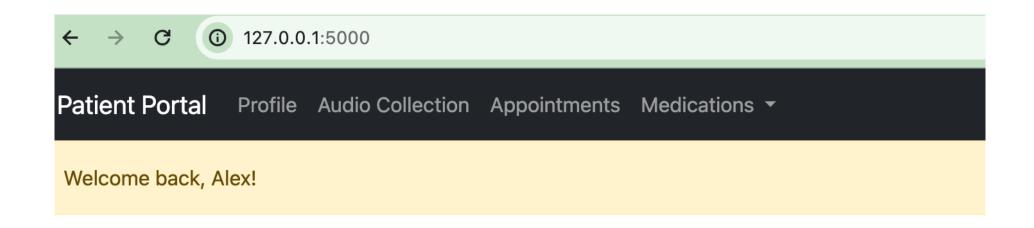

Patient login

Returning patient could login with their email and password

After login, show login credential

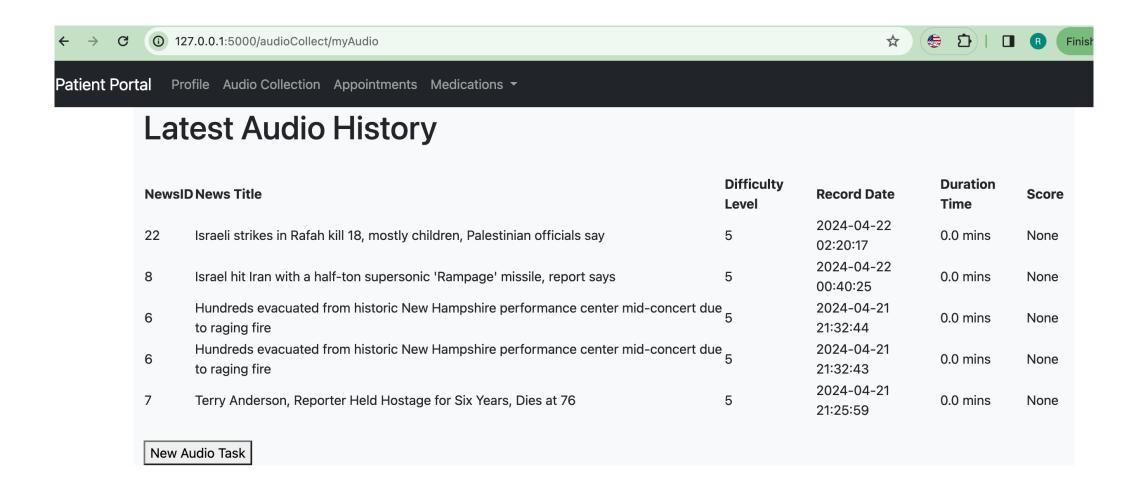

Welcome!

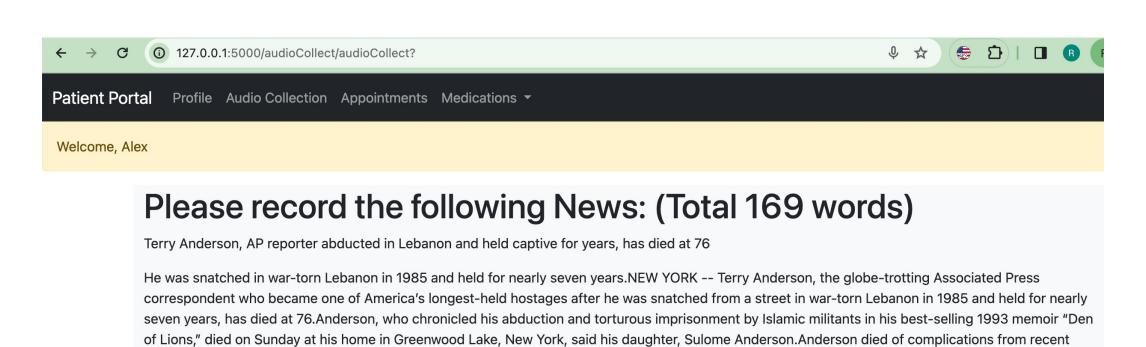

This is a FHIR client web app built with Flask.
